

YELLOW HYBRID MAIZE

LAKE 606

Technical Data	LAKE 606
Flowering Time	65 - 75 days
Silage Harvesting	110 - 130 days
Physiological Maturity	135 - 145 days
Plant Height	2.5 - 3.0 metres
Prolificacy	1-1.5 cobs
Tillering	Medium
Standability	Good
<u>DISEASE TOLERANCE</u>	(Good = 0; Susceptible = 5)
Streak Virus	2.0
Northern Leaf Blight	1.5
Grey Leaf Spot	2.5
Drought Tolerance	Very Good
Heat Tolerance	Very Good
Dry Down	Slow
Kernel Type	Dent
<u>Plant Stand</u>	<u>Target population</u>
Highveld Dryland (450 -750 mm)	30000-35000
High Rainfall (750 -1200 mm)	40000-50000
Silage Irrigation	60000-70000

LAKE 606 is a tropically adapted yellow maize hybrid that has performed well throughout West, East and Southern Africa. It is widely adapted to medium and high rainfall areas throughout the continent, and has sound attributes for both small scale and commercial farmers alike.
