

RED SPECKLED SUGARBEAN

LAKE 101

- Maturity:** Ultra-Early
- Grain Colour:** Tan with Red Speckles
- Grain Shape:** Cranberry (Oval)
- Days to 50% Flower:** 30
- Days to Harvest (14% RGM):** 90
- Growth Habit:** Determinate Bush Type
- Yield Potential:** 2.5Mt/ha

This ultra-early sugar bean is unmatched in its quickness to harvest. Ideally suited to farmers in famine or drought stricken areas that need to make use of a short season to achieve invaluable food security. The bean is highly nutritious with a high protein content. LAKE 101 is also suited to the commercial farmer aiming to benefit from high early season commodity prices by harvesting before the rest, reducing risk exposure or for the farmer wanting to plant a late season crop. The growth habit is upright and if planted with narrower rows and a population above 220,000 plants/ha, the high pod height may allow mechanical harvest.
