

RED BIO-FORTIFIED SUGARBEAN

LAKE 102

- Maturity:** Early
- Grain Colour:** Red with White Speckles
- Grain Shape:** Elongated Kidney
- Days to 50% Flower:** 40
- Days to Harvest (14% RGM):** 100
- Growth Habit:** Semi Determinate Bush Type
- Yield Potential:** 2.5Mt/ha

This high yielding, early maturing sugarbean variety is bio-fortified; and has been specifically bred to contain higher levels of Iron, Zinc and protein. LAKE 102 is thus the ideal crop for areas needing improved food nutrition – particularly after drought or famines. The bean is a fast cooking type with an excellent meaty flavour. It is an upright, bush type bean but continues flowering indeterminately; offering higher drought tolerance. For commercial farmers, the high yields and demand from food aid and feeding programmes make this an exciting new crop variety.
