

WHITE HYBRID MAIZE

LAKE 401

Maturity: Early

Grain Colour: White

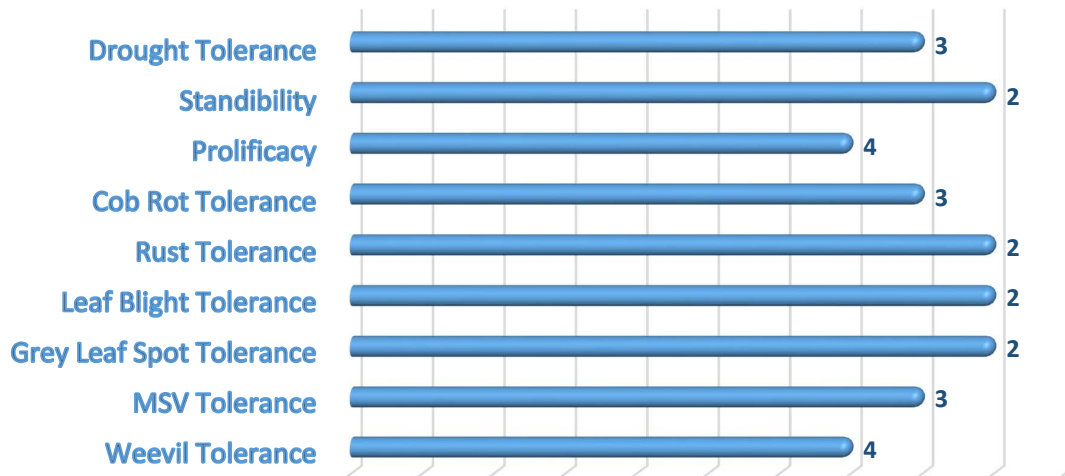

Grain Type: Semi Dent

Days to 50% Flower: 65

Days to Harvest (12% RGM): 130

Yield Potential: 8Mt/ha

LAKE 401 is a high potential quick hybrid but with all-round robust strength giving it a wide adaptability. The large cob size grain fills very quickly after flowering – an attribute for good drought tolerance. Once physiologically mature, the cob dries down slowly enhancing yield and protecting against in field weevil attack. LAKE 401 is an attractive plant type and shows excellent tolerance of all major leaf diseases.

1 = EXCELLENT; 5 = AVERAGE; 10 = POOR
