

WHITE HYBRID MAIZE

LAKE 601

- Maturity:** Medium
- Grain Colour:** White
- Grain Type:** Flint
- Days to 50% Flower:** 72
- Days to Harvest (12.5% RGM):** 140
- Yield Potential:** 9 Mt/ha
- GMO Status:** GMO-free

This tropical hybrid is well adapted across many of Africa’s environments from hot, humid lowlands to dry mid altitudes and high potential wet highlands. LAKE 601 performs stronger than other hybrids in acidic soils and also shows exceptionally good nitrogen-use efficiency, as well as Striga tolerance, making this hybrid a top performer in emerging farmer sectors. It is also recommended to commercial farmers for its high yield potential and resistance to Nicosulfuron herbicides.

1 = EXCELLENT; 5 = AVERAGE; 10 = POOR
